EQ SYSTEMS MINIMUM BATTERY REQUIREMENT FOR TEMPORARY OPERATION OF JACKS

October 2021

To allow temporary operation of Equalizer Systems trailer jacks to retract or extend front landing gear jacks for tow vehicle coupling purposes:

A Group 24 or larger battery with a 500 CCA or 100 AH rating recommended.

Minimum charge status of 60 percent (Approx. 12.2 volts)

Connect battery directly to vehicle supply power and ground cables for pump assembly.

Use of “jumper cables” allowed using 6 gauge or larger.

Note the above is only for temporary operation for coupling and uncoupling. Above may not be sufficient for full system operation.

Weak battery or poor connections will cause no operation or control panel shut down.
