2019 Legacy	156-158
2019 Berkshire	159-170

# FOREST RIVER DIESEL SYSTEMS BY MODEL YEAR AND FLOOR PLAN

This book is meant to be a guide for identifying parts on Forest River Diesel coaches. Please remember to make every effort to confirm the information contained in this book. There have been many changes to the component assemblies through the years and we do not have a way to know for sure the exact coach number that changes took effect. I am going to outline some of these changes with the manner in which you can verify what you are looking at.

# Slide Numbering

The first thing that I want to cover is the slide numbering system that we are using. Slide number "1" is always the slide on the driver's side directly behind the driver. The rest of the slides follow in order counter clockwise around the coach. For instance if there is a second slide on the driver's side, it would be slide "2". If not, then the rear slide on the passenger side would be slide "2". The next slide is slide "3" and so forth.

# <u>Pumps</u>

When we started on these coaches, we used a manual hand pump to achieve manual override. The pump numbers that were done this way are 7330 and 7380. In model year 2009 the hand pump was removed because the motor had a hex on the end that allows a drill to be put on the motor to achieve manual over ride. The pump harness on these pumps also had the main plug changed from a six way to a nine way. These pumps were number 7666, 7667, and 7668. The prototypes of the 2009 Berkshire 360FWS, Charleston 430FWS, and Charleston 430QS utilized bi-rotational pumps. These pump numbers are 7604 and 7611 and can be identified by having two motor solenoids on them. They were then changed back to uni-directional pumps until model year 2011. In model year 2011, all pumps were changed to bi-rotational pumps. These changes also changed the main harness to correspond with the pump harness.

# <u>Hoses</u>

Initially all coaches had two hose that ran from the pump to each jack leg. Beginning in February of 2008 the hose configuration was changed so that on the front legs instead of having two hoses from each jack leg running back to the pump, we ran a hose from the bottom of one jack to the bottom of the other, and then just on hose back to the pump. You will find two sets of charts for model year 2008 that reflects this change. Also in February of 2012 the arrangement of hoses on the Charleston 430BH, 430QS, and 430RB was changed. You will find two sets of charts for these as well.

# <u>Slides</u>

Slides have undergone the most changes in these systems. I will discuss these in two separate groups beginning with the driver's side slide that is near the front of the coach, most commonly referred to as the "Living Room Slide". There are three separate slides that were used on the driver's side. This does not include the hybrid slide used with Norco cables for timing and Equalizer hydraulic cylinder.

# 7258 MAIN SLIDE-32"

This is the original slide which began production near the end of 2005. This slide is identified by having the cylinder mounted centered between the two room support arms. Also, the center to center dimension of the room support arms is 69". The only change that this slide ever had, took place around the end of 2006. The coupling in the center of the timing shafts was changed from a Tran torque coupling to a flange coupling.

Tran Torque Coupling

Flange Coupling

If you need to replace one of the shafts with the old coupling, you will need to replace both shafts as the new shafts will only accept the new couplings.

# 7293 MAIN SLIDE-32"

This slide was first used on the 2007 Berkshire 390QS. It has the cylinder mounted centered between the two support arms. The center to center distance of the support arms is 81  $\frac{1}{2}$ ". This slide replaced all 7258 slides beginning in January of 2010.

# 7455 MAIN SLIDE-20"

This slide was only used on the Charleston 410FS. It has the cylinder mounted centered between the two support arms. The center to center distance of the support arms is 93  $\frac{1}{2}$ ". This slide was replaced by the 7708 slide beginning in January of 2010.

The next group of slides will be the passenger side front slides, most commonly referred to as the "Kitchen Slide".

# 7257 MAIN SLIDE-20"

This is the original slide which began production near the end of 2005. This slide is identified by having the cylinder mounted to the left hand room support arm. (Note: Left Hand & Right Hand as you view the room from outside of the coach) Also, the center to center dimension of the room support arms is 69". This slide underwent two major changes since inceptions. The first change took place around the end of 2006. The coupling in the center of the timing shafts was changed from a Tran torque coupling to a flange coupling. (See illustrations under 7258 slide.) If you need to replace one of the shafts with the old coupling, you will need to replace both shafts as the new shafts will only accept the new couplings.

The second change that took place on this slide was to add a fourth bearing and change the shaft arrangement. This change took place in early 2008. Each side of the older shafts was made with a short shaft bolted to a square tube and a short shaft with a gear on it bolted to the other end off the tube. The new shafts are one solid shaft with a square tube bolted to it with one bolt in the center to hold the tube. This is added to stiffen the shaft.

The old style shafts are no longer available so you must use the new ones as replacements and you must change both shafts. Along with this change we added a fourth bearing to the shafts. We have a kit that includes the brackets (Which must be welded to the frame) and bolts. (Part #6849) The last one of these slides was produced in September of 2008.

On some of these slides that have had multiple timing shaft failures, we have removed the timing shafts and added a second cylinder with flow dividers to time it. This is not possible on all floor plans. To determine if you can add the second cylinder, you must verify that there is room for it. On some floor plans the outer tube of the opposing slide is too close to the right hand outer tube to allow it. We developed a kit for this retrofit (Part #7723) along with a detailed instruction manual. It is recommended that anybody that may want to purchase this kit should first be sent the instruction manual so they can see the scope of the work.

# 7570 MAIN SLIDE-66 X 20" CENT. CYL.

This slide began replacing some of the 7257 slides in certain floor plans in May of 2008. To identify this slide notice that the cylinder is mounted centered between the room support arms. The room support arms are 69" center to center. The last time this slide was produced was in January of 2010.

# 7708 MAIN SLIDE-84 X 20"-FR

This slide replaced the 7570 completely in January of 2010. This slide also has the cylinder mounted centered between the room support arms. The room support arms are 81  $\frac{1}{2}$ " center to center.

The last groups of slides are the Equalizer/Norco hybrid slides. These slides have Norco cable and pulley systems to time the room and are driven by an Equalizer hydraulic cylinder. These are primarily used on full wall slides, and are clearly identified in the charts.
